## Introduction

When young people are connected to their communities through education, employment, and economic opportunity, [the incidence of youth and community violence is reduced](#). The presence of youth and community violence in the U.S. has been steadily growing with homicide as the [second leading cause of death](#) for teens and young adults aged 15-24. Structural racism and oppression have caused disparities in community violence. This has had, and continues to have, damaging effects on a number of outcomes, as demonstrated by the social determinants of health (SDoH), which are the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks. The impact of historic and continued structural racism on SDoH has caused and exacerbated health inequities.

This report evaluates risk and protective factors relating to youth and community violence across 5 domains: community conditions, economy, education, health, and housing. **Protective factors protect people from experiencing potentially traumatic events**, such as neglect or violence. **Risk factors increase the chances someone will experience a potentially traumatic event**. Identifying the existing strengths and assets within a community can build resilience and help to prevent youth and community violence.

## Community Conditions

- Link to this component <https://dashboards.mysidi> [Anchor link Copied!](#)

### Entropy Index

Communities are stronger when there are more [opportunities for community](#). The Entropy Index is a measure showing levels of distribution among racial/ethnic groups within a community. Values range from 0 to 1; 0 indicates an uneven distribution of the racial/ethnic groups while 1 indicates an even distribution. When communities are racially integrated, this results in [more economic opportunity and equitable access to resources](#). Reducing barriers to community connectedness and dismantling systems that result in inequitable access to opportunities could help to reduce community violence.

### Segregation

0.1

Entropy Index

Adams County, CO

0.2

Entropy Index

Colorado

Sources: US Census Bureau ACS 5-year 2018-2022

Note: Values range from 0 to 1. Values are near 0 when the 7 race/ethnicity categories are very unevenly distributed and values are near 1 when the distribution of the 7 race/ethnicity categories matches the overall geography distribution.

- [Link to this component](#) <https://dashboards.mysidi>
- Link to this component <https://dashboards.mysidi> [Anchor link Copied!](#)

### Percent Area Covered by Parks

Shared outdoor spaces to play can encourage community connectedness and contribute positively to overall health and wellness. Studies show that [increasing the amount of parks and other green spaces has resulted in lowering crime rates](#), especially in urban communities. Ensuring that people have shared, outdoor space within a reasonable distance to where they live could help to reduce youth and community violence.

### Income Inequality (Gini Index)

Income inequality is a result of many compounding factors such as [educational opportunity](#), [job availability](#), and [historical discrimination](#). When a small subset of a community owns the highest share of the wealth, this can create concentrated disadvantage that perpetuates structural racism and exacerbates existing discrimination. Studies have shown that areas with a high degree of income inequality are [far more likely to experience violence](#). Ensuring there is equal access to not only basic needs but also a wide variety of educational, personal, and professional opportunities to promote financial stability that results in earning generational wealth may help to reduce youth and community violence.

## Connected Youth

Connected youth are youth ages 16 to 19 who are either enrolled in school, employed, or both. [Recent studies indicate that connected youth are less likely to commit crimes.](#) Experiencing incarceration as a young person can impact them for the rest of their life. Ensuring that young people have a place within their communities can improve social cohesion and connectedness for not just youth, but for the whole community.

## Dashboard Controls

To get the most use out of this data, here's how you can **see, save, and share** it:

### Collections

When more data points are available for a specific topic, you'll see a list of data headings with arrows to the left. **Click on the down arrow** to expand that section and view the data. You can close that section by clicking on the up arrow. A collection may include many presentation types, such as maps, charts, tables, and more.

### Saving Data

If you want to save the data for yourself, it can be saved as a PDF, CSV (spreadsheet), SVG or PNG (photos), or even GeoJSON (for GIS applications). To see what file types are available, **click on the bar graph icon** on the top right of that data visualization.

## Embedding Data on Your Website

If you want to share data from the dashboard on a website, send in an email, or share on social media, you can link to a specific section. To do that, hover over a page heading or data visualization. **Two chain links should appear.** Clicking on those links will move that section to the top of the page. Next, copy the link from the search bar to use as a direct link to that section of a page. You can also right click and select 'copy link address'.
