**Request:**

Xcel Energy is proposing to replace the existing eight-foot-tall chain-link and wood panel fencing around the perimeter of the Substation with the installation of 1,750 linear feet of ten-foot tall, expanded metal/mesh fencing as an increased security measure. Other proposed physical security upgrades to the Substation include: replacing the existing manual gates with 10-foot-tall, 1-inch mesh gates; installing perimeter lighting on the fence and associated lighting transformer; and installing new company-standard "No Trespassing" signage.

The construction plan is to rebuild the fence in the current location and add the additional security measures after the fence is in place. The construction will be done within the current fence line, while utilizing an area outside of the fence on Substation property for temporary storage of construction material and equipment. This project is expected to start in October 2024 and take 6 months to complete. No additional land acquisition is anticipated for the proposed work, and the proposed equipment additions do not change the use of the land or expand the site boundaries. No new buildings or transmission equipment are planned.
